

4X integer throughput compared to four to five year old server.¹

“Millions of customers depend on Zoho to deliver a broad suite of applications for their mission-critical business processes and productivity each day. We cannot fail them. We chose Intel’s end-to-end hardware and software solutions for their proven performance, scalability, and reliability to empower our global data centers.”

**Shailesh Kumar Davey,
Vice President, Zoho**

Massive Cloud Deployment Speeds Zoho’s SaaS Solutions for Business

Zoho applications help customers manage multiple business processes like CRM, human resources and accounting. The company’s massive deployment relies on multiple data centers located in several countries that must deliver low latency, scalability, reliability, and compliance levels that businesses require. Zoho data centers require underlying technologies, which offer excellent price-performance, low power consumption, thermal efficiency and more. To best meet the needs of its growing client base, Zoho adopted a combination of Intel® Xeon Scalable processors, Intel® 3D NAND SSDs and 25GbE Intel® Ethernet Adapters. Together, they make a substantial contribution to each data center’s ability to handle increased traffic.
