

Datto Uses the 11th Gen Intel vPro® Platform to Power Remote Monitoring and Management

Datto is a leading global provider of cloud-based software and technology solutions delivered through managed service providers (MSPs). With the 11th Gen vPro® Platform integrated into Datto Remote Monitoring and Management (RMM), solution providers are now able to provide the great service that they've been delivering for the SMB market into the mid and larger markets. The combination of Datto RMM and Intel® Endpoint Management Assistant, as part of the Intel vPro® platform, provides MSPs with remote, more secure and uninterrupted, hardware-level access to client endpoint devices, even when the operating system is not functioning properly. MSPs can remotely power, more securely manage and control the device, enabling comprehensive remote support and software and patch updates.

“Being able to watch multiple environments with multiple devices within each environment – that’s what excites me the most about our integration with vPro. It just adds even more efficiency to the actual technology allowing MSPs to provide even better service and quality of service to their ultimate end-users.”

Rob Rae, SVP of Business Development, Datto
